

Are you looking for a flexible job where you can gain experience in IT projects and actively contribute your talent to the development of modern software products?

We are a new company building exciting products on the blockchain and delivering cutting edge software solutions for our clients.

For our ongoing and future project like open source smart contracts and EVM based tokens we are looking for those who like to learn and experiment with new technologies.

## Responsibilities

- Further development of our technical infrastructure
- Implementation of software products and tests
- Insights into the interaction of product development and IT services
- Modern and agile software development with uptodate tools
- Remote work - you decide where you want to work from.
- Flexible working hours.

## Requirements

- 1-2 years of coding experience preferably in Javascript, Python, Node.js and/or Solidity for core engineering roles.
- Experience with Web Design Technologies like HTML5, SASS/SCSS, bootstrap like libraries

Nice to have:

- Experience Prototyping new designs for web apps (with tools like Figma, Adobe XD or Invision)
- Self-starter, ability to envision solutions and take initiative to see the solution to the end despite challenges.
- Ability to crystallize vague concepts into concise plans with clear documentation.
- Detail-oriented, organized, ethical, responsible, and self-motivated.
- Team player, ability to work effectively in a matrix organization.
- Strong communication skills and a desire to learn something new.
- A passion for creating great and fun products

Work conditions:

- Working time approx. 40 hours per week
- Compensation will be based on your skills.

Benefits:

- Bonus for completing projects and milestones
- On the job mentoring
- Wrb3 Conference attendances
